### DETAILED ACTION

This is the third office action for U.S. Application 09/600,209 for a Material Support Stand filed by Brad Neilson on July 12, 2000. Claims 4-9, 11, and 13 are pending.

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 4-9, 11, and 13 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent 4,007,841 to Seipel. Seipel discloses an equipment support stand that can be used on an underground mining machine adjacent to an apparatus. The stand has a base (13, 14) adapted to stand on the surface of a machine, and an upstanding rack (10) shaped and configured to hold or support items, mounted to the base. There is a plurality of clamps (34', 35') for releasably securing the base to the surface, the clamps having a hook formation adapted to pass through an aperture in the surface of a machine and hook beneath the surface to rigidly fix the stand to the surface. The upstanding rack has a frame with arms (22) projecting laterally therefrom to at least one side thereof, wherein items can be held in position by the arms. At least a pair of arms is aligned generally side by side with each other and defining a space there between in which items can be located and the stand is adapted to be coupled back to back with

another stand to provide for double storage capacity with access from at least two sides. There are pegs (23) projecting upwardly at an inclined angle to the horizontal, the pegs being adapted to support annular items or items that have holes or bores there through. The hook formation is tensionable by an over center locking lever (37) connected thereto which, when tensioned, will tightly clamp the stand to the surface. Claims 4-9, 11, and 13 contain limitations to the mining machine, apparatus on the mining machine, and the interchangeable items. However, those features are not positively recited in the claims and therefore carry no patentable significance.

### ***Response to Arguments***

Applicant's arguments with respect to claims 4-9, 11, and 13 have been considered but are moot in view of the new ground(s) of rejection.
